

# Quickstart Guide

Congratulations and thank you for purchasing your WinBook notebook. Follow these easy step-by-step instructions for quick installation of your notebook.

## 1 prepare your work space

- If using a modem, set-up your system near a phone outlet.
- Keep all air vents clear. Leave four to six inches between the vents of your computer and walls. Computers can be put on a table or floor, careful not to block ventilation holes.
- Don't place your computer by a sunlit window. Excessive heat will shorten the life of a computer.
- Don't use your computer in dusty areas or areas of extreme humidity and temperature.

## 2 install the battery

AC Connector

Before starting your system, you should remove the battery from the accessories box and install it in your system.

- Angle the new battery into the bay.
- The front edge of the battery should slide into the grooves of the system case.
- Gently press down on the battery until an audible click indicates that the latch has been secured.

The first time you use your WinBook notebook, use your AC power adapter. This will allow your battery to fully charge.
